

ACE Academy Exclusion for Symptoms—Early Return Confirmation

Under OBAP’s ACE Academy Health Check and Illness Policy, households are screened daily for COVID-like symptoms (such as fever, sore throat, difficulty breathing, cough, muscle aches, and new loss of taste or smell).

If COVID-19-like symptoms are present, all non-immune members of the household are excluded for 10 days, however, immune¹ members of the household (as defined below) are not excluded unless they become symptomatic.

Households may now be able to return early if the following conditions are met:

1. After onset of the exclusionary symptoms, each symptomatic member of the household has **tested negative** using a molecular (PCR) test for SARS- CoV-2;
2. The household has remained **out of the academy for at least two full days** since any household member first experienced symptoms.
3. Each symptomatic household member has been **fever-free for at least 24 hours** with symptoms improving and has not developed any new symptoms since being tested.
4. The early return is permissible under local guidance and any additional quarantine/isolation periods, or other return requirements required by their medical provider or imposed by the Department of Health have been met.

I HAVE READ, UNDERSTOOD, CONFIRM AND AGREE THAT MY HOUSEHOLD MEETS THE CONDITIONS SET FORTH IN PARAGRAPHS 1 THROUGH 4 ABOVE. I UNDERSTAND OBAP WILL RELY ON MY STATEMENT TO ALLOW MEMBERS OF MY HOUSEHOLD TO RETURN TO THE ACE ACADEMY.

Name of Child/Children:

Parent/Guardian name:
